SUBSTITUTE DOMINANT CHORDS

The characteristic of dominant chord sound can be attributed to the tritone which exists between the third and seventh of the dominant chord:

The quality of the tritone remains unaffected even if inverted:

Therefore, the above tritone may be notated as either an aug. 4th or a dim. 5th (as in the above two examples). Thus, the same tritone may be notated enharmonically to produce another +4th tritone which inverts to another *5th tritone. Though the tritones involved appear different, they all contain the same sound (tritone = 3 whole steps):

Since the dominant chord quality requires the tritone to represent chord tones three and seven, the root must be present for a complete chord sound:

The resulting two dominant chords contain the same tritone and may therefore function similarly. The context in which either chord appears determines the function.

The dominant chord and its **substitute dominant** chord share the same tritone and their roots are a tritone apart. (These chords are also known as "tritone substitute" chords.)

The substitute dominant for V7/I is subV7/I. Just as the expected resolution of V7/I resolving to I requires an arrow (showing the actual resolution), the resolution of the subV7 has a special analysis, a dotted arrow.

A SOLID ARROW INDICATES DOMINANT RESOLUTION DOWN A PERFECT FIFTH; A DOTTED ARROW INDICATES DOMINANT RESOLUTION DOWN A HALF STEP.

The primary dominant and secondary dominants are chords which have an expected resolution down a perfect fifth. The expected resolution for substitute dominants is down a half step. The substitute secondary dominant chords are subV7/II, subV7/IV, subV7/V:

$\text{sub V}^7/\text{II} \quad \text{II}^-7$ $\text{sub V}^7/\text{IV} \quad \text{IV} \text{maj}^7$ $\text{sub V}^7/\text{V} \quad \text{V}^7$
 C: $\text{Eb}^7 \rightarrow \text{D}^-7$ $\text{Gb}^7 \rightarrow \text{F} \text{maj}^7$ $\text{Ab}^7 \rightarrow \text{G}^7$

One characteristic of substitute dominant chords is that their roots are not diatonic. (The primary and secondary dominant chords have diatonic roots.) IV7 also has a diatonic root. It rarely sounds as though its function will be as a substitute dominant (though it may resolve down a half step to III-7).

bVII^7 's function as a modal interchange chord is more common than the possibility of a subV7/VI function.

In unusual situations (most often dictated by harmonic rhythm) subV7/III and subV7/VI may occur, but V7/IV is never subV7/VII.

Substitute dominant motion is also common to contemporary minor key chord progressions:

The image displays four staves of handwritten musical notation in the key of F major (one flat). The notation illustrates various substitute dominant motions between chords, with arrows indicating the progression and labels for the substitute chords.

- Staff 1 (Treble Clef):**
 - Chord: F-7
 - Motion: $\text{sub V}^7/\text{IV} \text{ Db7} \rightarrow \text{IV}^7 \text{ C7}$
 - Chord: F-
 - Motion: $\text{sub V}^7/\text{III} \text{ Ab7} \rightarrow \text{III}^7(\text{b5}) \text{ G-7(b5)}$
 - Motion: $\text{sub V}^7 \text{ Gb7} \rightarrow$
- Staff 2 (Bass Clef):**
 - Chord: F-7
 - Motion: $\text{sub V}^7/\text{IV} \text{ Cb7} \rightarrow \text{IV}^7 \text{ Bb-7}$
 - Motion: $\text{sub V}^7/\text{III} \text{ Db7} \rightarrow \text{III}^7 \text{ C7}$
 - Chord: F-
 - Chord: Dbmaj7
- Staff 3 (Bass Clef):**
 - Chord: Gbmaj7
 - Chord: F-
 - Chord: C-7(b5)
 - Chord: F7(b9)
 - Chord: Bb-
 - Chord: G7
- Staff 4 (Bass Clef):**
 - Motion 1: $\text{1. sub V}^7/\text{IV} \text{ Db7} \rightarrow \text{IV}^7 \text{ C7}$
 - Motion 2: $\text{2. G-7(b5) C7 sub V}^7 \text{ Gb7} \rightarrow \text{F-}$

RELATED II-7 CHORDS - SUBSTITUTE DOMINANTS

Any dominant chord may be preceded by its related II-7. The related II-7 chords of the secondary dominants are diatonic except the related II-7 of V7/III, which has a non-diatonic root. However, the related II-7's of substitute dominants are non-diatonically rooted. Therefore, since the related II-7 chords of the substitute dominants cannot have dual function, they will be analyzed in terms of their relationships with substitute dominant chords; the — relationship.

$Ab-7 \quad sub\ V^7 \quad Db7 \dashrightarrow Cmaj7$
 $Db-7 \quad sub\ V^7/IV \quad Gb7 \dashrightarrow Fmaj7$
 $Eb-7 \quad sub\ V^7/II \quad Ab7 \dashrightarrow D-7$
 $Eb-7 \quad sub\ V^7/IV \quad Ab7 \dashrightarrow G7$

With the inclusion of the related II-7 chords for both primary or secondary dominants and their substitute dominants, a four-way chordal relationship can exist:

interchange

$D-7 \quad V^7 \quad G7 \rightarrow C$
 $Ab-7 \quad sub\ V^7 \quad Db7 \dashrightarrow C$
 $D-7 \quad sub\ V^7 \quad Db-7 \dashrightarrow C$
 $Ab-7 \quad V^7 \quad G7 \rightarrow C$

The related II-7's of the primary or secondary dominants may progress normally:

$I_{maj7} \quad V^7/IV \quad IV^6 \quad III-7 \quad V^7/II \quad II-7 \quad VI-7 \quad V^7/IV \quad V^7(sus4) \quad II-7 \quad V^7$
 $C_{maj7} \quad G-7 \quad C7 \rightarrow F^6 \quad E-7 \quad A7 \rightarrow D-7 \quad A-7 \quad D7 \rightarrow G7(sus4) \quad D-7 \quad G7 \rightarrow$

The related II-7's of the substitute dominants may progress normally:

I_{maj7} $subV^7/III$ IV^6 $subV^7/II$ $II-7$ $subV^7/VI$ $V^7(sus4)$ $subV^7$
 C_{maj7} D^b-7 $G^b7 \rightarrow F^6$ B^b-7 $E^b7 \rightarrow D-7$ E^b-7 $A^b7 \rightarrow G^7(sus4)$ A^b-7 $D^b7 \rightarrow$

OR, any of the above II-7 chords may progress down a half step to the substitute for its dominant chord. Since the root motion from the II-7 to the dominant will be down a half step, the analysis symbol used is a dotted bracket.

I_{maj7} $subV^7/III$ IV^6 $III-7$ $subV^7/II$ $II-7$ $VI-7$ $subV^7/VI$ $V^7(sus4)$ $II-7$ $subV^7$
 C_{maj7} $G-7$ $G^b7 \rightarrow F^6$ $E-7$ $E^b7 \rightarrow D-7$ $A-7$ $A^b7 \rightarrow G^7(sus4)$ $D-7$ $D^b7 \rightarrow$

OR:

I_{maj7} V^7/III IV^6 V^7/II $II-7$ V^7/VI $V^7(sus4)$ V^7
 C_{maj7} D^b-7 $C^7 \rightarrow F^6$ B^b-7 $A^7 \rightarrow D-7$ E^b-7 $D^7 \rightarrow G^7(sus4)$ A^b-7 $G^7 \rightarrow$

A solid arrow or bracket indicates root motion down a perfect fifth:

A dotted arrow or bracket indicates root motion down a half step:

AVAILABLE TENSIONS-SUBSTITUTE DOMINANTS

Inasmuch as substitute dominant chords are not diatonic structures, their extended structures do not require a diatonic orientation. The tensions available on any substitute dominant are the pitches a major ninth above any chord tone (whether diatonic to the key or not).

subV⁷
Db7

subV⁷/II
Eb7

subV⁷/IV
Gb7

subV⁷/V
Ab7

In all cases, it should be noted that the tension #11 on a substitute dominant represents the root of the original chord of derivation (the primary dominant or secondary dominant).

All substitute dominant chords have available tensions 9, #11, and 13.

If the extended structure of the substitute dominant is supported by the root of the respective original primary or secondary dominant chord, an alternative to the normal available tensions for the primary or secondary dominant chords may be found:

subV⁷
Db⁷/G bass

subV⁷/II
Eb⁷/A bass

subV⁷/IV
Gb⁷/C bass

subV⁷/V
Ab⁷/D bass

V⁷

V⁷/II

V⁷/IV

V⁷/V

V7/I normally has available tensions 9 and 13; it may optionally use tensions $\flat 9$, $\sharp 9$, $\flat 5$, and $\flat 13$:

C: V^7/I G^7 $\text{V}^7(\text{alt})/\text{I}$ $\text{G}^7(\text{alt})$

Any dominant chord with the above alterations (altered 9, 5, 13) is notated as "altered", abbreviated as (alt). (Although not universally used, this abbreviation is generally understood.)

Although V^7/IV normally has available tensions 9 and 13, it may optionally use the altered tensions:

C: V^7/IV C^7 $\text{V}^7(\text{alt})/\text{IV}$ $\text{C}^7(\text{alt})$

V^7/V normally has available tensions 9 (alternatively, $\flat 9$, $\sharp 9$) and 13; it may optionally use the remaining altered tensions:

C: $\text{V}^7(\flat 9)/\text{V}$ $\text{D}^7(\flat 9)$ $\text{V}^7(\sharp 9)/\text{V}$ $\text{D}^7(\sharp 9)$ $\text{V}^7(\text{alt})/\text{V}$ $\text{D}^7(\text{alt})$

V7/II normally has available tensions 9 (alternatively, $\flat 9$, $\sharp 9$) and $\flat 13$; it may optionally use the remaining altered tensions:

Handwritten musical notation for V7/II chords in C major. The notation shows three measures on a grand staff. Above the first measure is $V7(9)/II$ and $A7(9)$. Above the second measure is $V7(\sharp 9)/II$ and $A7(\sharp 9)$. Above the third measure is $V7(\flat 9)/II$ and $A7(\flat 9)$. The notes are: Measure 1: C4, E4, G4, Bb4, D5, F5; Measure 2: C4, E4, G4, Bb4, D5, F5; Measure 3: C4, E4, G4, Bb4, D5, F5. Fingering numbers 1-3 are shown for the right hand.

If the option of altered tensions is used, the chord symbol MUST reflect that option.

Handwritten musical notation for a C7 chord in C major. The notation shows a single measure on a grand staff. Above the first measure is C . Above the second measure is $C7$ with a circled 7 and a note: $C7 = C7(\text{alt})$ or $C7(\flat 9)$. Above the third measure is F . Above the fourth measure is F . The notes are: Measure 1: C4, E4, G4, Bb4, D5, F5; Measure 2: C4, E4, G4, Bb4, D5, F5; Measure 3: C4, E4, G4, Bb4, D5, F5; Measure 4: C4, E4, G4, Bb4, D5, F5. Fingering numbers 1-3 are shown for the right hand.

The available tensions for the related II-7 chords of substitute dominants are drawn from the key in which the chord is the diatonic II-7:

Handwritten musical notation for II-7 chords of substitute dominants. The notation shows two systems of grand staves. The first system shows: $C_{\text{maj}}7$, $D\flat-7$, $G\sharp 7$, $F\flat$, $B\flat-7$, $E\sharp 7$. The second system shows: $D-7$, $E\flat-7$, $A\flat 7$, $G7(\text{sus } 4)$, $A\flat-7$, $D\flat 7$. The notes are: System 1: Measure 1: C4, E4, G4, Bb4, D5, F5; Measure 2: C4, E4, G4, Bb4, D5, F5; Measure 3: C4, E4, G4, Bb4, D5, F5; Measure 4: C4, E4, G4, Bb4, D5, F5; Measure 5: C4, E4, G4, Bb4, D5, F5; Measure 6: C4, E4, G4, Bb4, D5, F5. System 2: Measure 1: C4, E4, G4, Bb4, D5, F5; Measure 2: C4, E4, G4, Bb4, D5, F5; Measure 3: C4, E4, G4, Bb4, D5, F5; Measure 4: C4, E4, G4, Bb4, D5, F5; Measure 5: C4, E4, G4, Bb4, D5, F5; Measure 6: C4, E4, G4, Bb4, D5, F5. Fingering numbers 1-3 are shown for the right hand.

Though the primary and secondary dominants and their respective substitute dominants are substitutes for each other, the same is not true for the related II-7 chords. By comparing the available pitches for both kinds of II-7 chords, it can be seen that totally different available note options are produced:

D-7 as related II-7 of V7(G7)

A^b-7 as related II-7 of subV7(D^b7)

Available to D-7:

Available to A^b-7:

 Summary of available tensions: primary dominant, secondary dominants, substitute dominants and related II-7 chords.

Chord:	Available tensions:	Optional tensions:
V7/I	9, 13	(alt)
subV7/I	9, #11, 13	
V7/II	9, ^b 13	^b 9, #9, ^b 13 or (alt)
subV7/II	9, #11, 13	
V7/III	^b 9, #9, ^b 13	(alt)
V7/IV	9, 13	(alt)
subV7/IV	9, #11, 13	
V7/V	9, 13	^b 9, #9, 13 or (alt)
V7/VI	^b 9, #9, ^b 13	(alt)

Related II-7:

of V7/I	9, 11	
of V7/II	11 (as III-7)	9, 11 (as related II-7)
of V7/III	9, 11	11, ^b 13 [as #IV-7(^b 5)]
of V7/IV	9, 11	
of V7/V	9, 11	
of V7/VI <i>se Diatonic</i>	11, ^b 13 [as VII-7(^b 5)]	9, 11 (as related II-7)
of all subV7's	9, 11	

EXTENDED SUBSTITUTE DOMINANTS

Extended dominants are dominant chords which are placed at strong stress points, or within a pattern of dominant resolution following the cycle of fifths with an extended dominant as the starting point for the pattern.

The same characteristics apply when substitute dominant chords are involved. The root motion during extended dominant motion follows the cycle of fifths; the root motion during extended substitute dominant motion is chromatic:

Chromatic

Chromatic

In the first four measures of the above examples, every other chord represents an extended substitute dominant chord, while the remaining chords are extended dominants though they resolve by half step:

[The same example using no substitute dominants.]

The decision to hear an extended dominant versus an extended substitute dominant is made by the listener based on the function of the dominant in the key. If the root of the first dominant chord in the pattern is diatonic, it will sound like an extended dominant:

Diatonic

If the root of the first dominant chord in the pattern is not diatonic, it will sound like an extended substitute dominant:

The diagram shows a musical staff in G major with the following chords and their roots: Gmaj7 (G), E-7 (E), A-7 (A), F#7 (F#), F7 (F), E7 (E), Eb7 (Eb), and Ab7 (Ab). The F#7 chord is marked as non-diatonic. A box labeled "Pattern begins" is placed above the F7 chord. The sequence of roots is G, E, A, F#, F, E, Eb, Ab.

It should be observed that the complexities resulting from the inclusion of substitute dominant chords within a progression make that progression very difficult to hear. This, in turn, allows for more freedom in the choice of usable tensions.

Generally,

- 1) if movement from an extended dominant is down a perfect fifth, the following dominant will sound like another extended dominant;
- 2) if movement from an extended dominant is down a half step, the following dominant will sound like an extended substitute dominant;
- 3) if movement from an extended substitute dominant is down a perfect fifth the following dominant will sound like another substitute dominant;

4) If movement from an extended substitute dominant is down a half step, the following dominant will sound like an extended dominant:

The available tensions for extended substitute dominant chords are 9, #11, 13 (the same as all subV7's).

The extended substitute dominant may be interpolated prior to the resolution of an extended dominant:

It is more common for the substitute dominant to follow the extended dominant (as above) than for the substitute to appear first.

Related II-7 chords may precede their respective dominant chords (either or):

As is the case for all extended dominant motion, harmonic rhythm will be increased with the inclusion of related II-7 chords. Further, a II-7 may itself be the target chord of resolution.

DIATONIC CHORD SCALES

CHORD SCALES are used to identify a chord's available melodic and harmonic pitches. Chord scales may be described as extended chord structures, with tensions and other non-chord tones displaced down an octave to create a scale.

The above extended maj7 chord may be identified either as Cmaj7(#11) or as a Lydian chord scale. Modal terminology (Lydian) is used to identify the interval relationships between adjacent pitches. Available tensions are those non-chord tones which are a whole step above a chord tone (a major ninth reduced by an octave).

The modal name for the chord scale above is C Ionian. The chord symbol would be Cmaj7. Both the chord symbol and the chord scale refer to the same structure, but the chord scale is more complete. The scale shows all the available melodic pitches including the fourth degree (F), which is available as a scale approach note. **AVOID NOTES** are avoided harmonically but available melodically. (Note: Avoid notes are indicated by filled in note heads, while the available chord tones and tensions are written as whole notes. Also, note that the fourth degree of any Ionian scale is an avoid note.)

DIATONIC CHORDS USE DIATONIC CHORD SCALES. Available tensions will be a whole step above a chord tone. Other pitches (a half step above a chord tone) will be avoid notes. (All examples for this topic are demonstrated in C major.)

The I chord uses an **Ionian** chord scale; the fourth degree is avoided:

Cmaj7 = Imaj7 = C Ionian

The II-7 chord uses a **Dorian** chord scale. The sixth degree is avoided, even though it is a whole step above the 5th, because it creates a tritone with the 3rd of the chord. This suggests a dominant quality rather than subdominant.*

D-7 = II-7 = D Dorian

The III-7 chord uses a **Phrygian** chord scale; the second and sixth degrees are avoided:

E-7 = III-7 = E Phrygian

The IV chord uses a **Lydian** chord scale; there are no avoid notes:

Fmaj7 = IVmaj7 = F Lydian

*The harmonically avoided 6th degree in the Dorian scale is the only exception to the availability of a non-chord tone a whole step above a chord tone.

The **V7** chord uses a **Mixolydian** chord scale; the 4th degree is avoided:

G7 = V7 = G Mixolydian

The **VI-7** chord uses an **Aeolian** scale; the 6th degree is avoided:

A-7 = VI-7 = A Aeolian

The **VII-7(b5)** chord uses a **Locrian** scale; the 2nd degree is avoided:

B-7(b5) = VII-7(b5) = B Locrian

For diatonic chord progressions, available tensions and other non-chord tones will be diatonic. Hence, the chord scales will be diatonic:

$\text{VII-7}(b5)$
 $\text{B-7}(b5)$

III-7
 E-7

II-7
 D-7

 Cmaj7

DECEPTIVE RESOLUTIONS - V7/I

Two of the standard deceptive resolutions of the V7 chord have been seen in diatonic harmonic analysis. V7 of I resolving to the III-7 or VI-7 (both tonic substitute chords) are common examples of deceptive resolution.

Diagram illustrating two deceptive resolutions of V7/I. The first resolution shows F-7 (II-7) resolving to Bb7 (V7/I) and then to G-7 (III-7). The second resolution shows F-7 (II-7) resolving to Bb7 (V7/I) and then to C-7 (VI-7).

These deceptive resolutions are so common that they do not require a deceptive resolution analysis (the use of parentheses). The justification for the above harmonic motion is diatonic progressing to diatonic. The following deceptive resolutions of the V7/I chord have the same basis and are analyzed without parentheses, though the chords involved are non-diatonic.

①

V7/I may resolve deceptively to \sharp IV-7(b5): O.K.

Diagram illustrating a deceptive resolution of V7/I to \sharp IV-7(b5). The first resolution shows F-7 (II-7) resolving to Bb7 (V7/I) and then to A-7(b5) (\sharp IV-7(b5)).

②

V7/I may resolve deceptively to \flat III maj7:

Diagram illustrating a deceptive resolution of V7/I to \flat III maj7. The first resolution shows F-7 (II-7) resolving to Bb7 (V7/I) and then to Gbmaj7 (\flat III maj7).

V7/I may also resolve deceptively to the other maj7 modal interchange chords.

V7/I to $\text{b}II$ maj7:

Handwritten notes above the staff: II^{-7} F-7, $\text{II}^{\flat}/\text{I}$ B \flat 7, $\text{bII}^{\text{maj}7}$ F \flat maj7. An arrow points from the second chord to the third with the interval $\frac{4}{5}$ written above it. A circled smiley face is to the left.

V7/I to bVI maj7:

Handwritten notes above the staff: II^{-7} F-7, $\text{II}^{\flat}/\text{I}$ B \flat 7, $\text{bVI}^{\text{maj}7}$ C \flat maj7. An arrow points from the second chord to the third with the interval $\frac{1}{2}$ written above it. A circled smiley face is to the left.

Less often, V7/I may deceptively resolve to bVII maj7:

Handwritten notes above the staff: II^{-7} F-7, $\text{II}^{\flat}/\text{I}$ B \flat 7, $\text{bVII}^{\text{maj}7}$ D \flat maj7. An arrow points from the second chord to the third with the interval 3^{m} written above it. A circled smiley face is to the left.

When V7/I resolves deceptively to any of the above chords, it most often occurs at a melodic cadence and sounds as though the progression will eventually move to tonic.

The strongest melodic pitches at cadence points are degrees 1 and 5 of the key. These two diatonic notes have the most "final" sound melodically:

Musical notation in 3/4 time showing a melodic line with notes G \flat (labeled 7), A \flat (labeled 1), and B \flat (labeled 2). A slur covers the last two notes.

Musical notation in 3/4 time showing a melodic line with notes C \flat (labeled 4), D \flat (labeled 5), E \flat (labeled 6), and F \flat (labeled 5). A slur covers the last three notes.

An examination of the available pitches for III-7, VI-7, \sharp IV-7(\flat 5), \flat III maj7, \flat II maj7, \flat VI maj7, and \flat VII maj7 shows each deceptive resolution of V7/I to have scale degree 1 or 5, or both, available.

I maj7

III-7

VI-7

\sharp IV-7(\flat 5)

\flat III maj7

\flat II maj7

\flat VI maj7

\flat VII maj7

When V7/I resolves deceptively to a maj7th chord, the progression often follows the cycle of fifths to return to tonic:

A musical score in G major (one sharp) showing a cycle of fifths progression. The chords are: B^b7, G^b maj7, C^b maj7, F^b maj7, and E^b. The notation includes a treble clef, a key signature of one sharp, and a bass line with a wavy line indicating a steady accompaniment. The chords are written as whole notes on a grand staff.

When V7/I resolves deceptively to \sharp IV-7(^D5), the progression often continues with chromatically descending motion to the tonic:

A musical score in G major (one sharp) showing a chromatically descending progression. The chords are: B^b7, A-7(^b5), A^b-7, E^b/G, G^b7, F-7, F^b maj7, and E^b. The notation includes a treble clef, a key signature of one sharp, and a bass line with a wavy line. The chords are written as whole notes on a grand staff.

V7/I resolving deceptively to III-7 or VI-7 most often occurs in progressions which are strictly diatonic.

CHORD SCALES - DOMINANT CHORDS

Chord scales for secondary dominants reflect their expected diatonic resolutions. All secondary dominants are expected to resolve down a perfect fifth. The root of the expected resolution chord will be the fourth degree of the chord scale. The dominant chord scale which contains an avoided fourth degree is Mixolydian, so all **secondary dominant** chord scales are some form of **Mixolydian**.

The chord scale used for **V7/IV** is **Mixolydian**; the 4th degree (the root of the expected resolution chord) is avoided:

V7/IV
C7

Root of Fmaj7

The chord scale used for **V7/V** is **Mixolydian**; as above, the 4th degree is avoided:

V7/V
D7

Root of G7

The chord scale used for **V7/II** is **Mixolydian** ^b13; the fourth degree is avoided and there is a **conditional avoid note**. Though ^b13 is an exception to the "major-ninth-above-a-chord tone" rule (and is therefore a half step above a chord tone), it and the 5th may not normally appear simultaneously together. Conditional avoid notes are both enclosed in parentheses:

V7/II
A7

Root of D-7

The chord scale used for **V7/III** is **Mixolydian b_9 (optionally $\#9$), b_{13}** ; the 4th degree is avoided, and 5 and b_{13} are conditional avoid notes:

V7/III
B7

Root of E-7

!?

The chord scale used for **V7/VI** is **Mixolydian b_9 (optionally $\#9$), b_{13}** ; the 4th degree is avoided and 5 and b_{13} are conditional avoid notes:

V7/VI
E7

Root of A-7

There are optional chord scales for the primary and secondary dominant chords. In addition to the above chord scales, any secondary dominant chord and the primary dominant chord may have added alterations:

V7 (Mixolydian)

G7

V7(b_9)

(Mixolydian b_9 , $\#9$)

G7(b_9)

V7(b_9 , b_{13}) (Mixolydian b_9 , $\#9$, b_{13})

G7(b_9 , b_{13})

V7(alt) (altered)

G7(alt)

V7/IV and **V7/V** may utilize any of the above alterations also.

V7/II may use any of the following chord scales:

V7(^b13)/II (Mixolydian ^b13)

V7([#]9, ^b13)/II
(Mixolydian ^b9, [#]9, ^b13)

V7(alt)/II (altered)

V7/III and V7/VI may be either Mixolydian ^b9, [#]9, ^b13 or altered:

V7(^b9, ^b13)/III (Mixolydian ^b9, [#]9, ^b13) V7(alt)/III (altered)

V7(^b9, ^b13)/VI (Mixolydian ^b9, [#]9, ^b13) V7(alt)/VI (altered)

As a general rule, all chords with an expected resolution down a perfect fifth use a Mixolydian scale (with or without alterations) or an altered scale. Any dominant chord not expected to resolve down a perfect fifth uses a Lydian ^b7 scale. This distinction is the reason for not using the term "Mixolydian [#]4".

The Lydian $\flat 7$ chord scale is used for **all substitute dominant chords** (expected resolution down a half step), $\flat VII7$ (expected resolution up a whole step), $\textcircled{IV7}$ in a major key context (expected resolution down a perfect fourth), and **extended substitute dominant chords** (also expected to resolve down a half step).

subV7 (Lydian $\flat 7$)

Musical staff showing notes B \flat , D, F, A \flat , C, E \flat , G \flat . Chord symbols: 9, #11, 13.

subV7/II (Lydian $\flat 7$)

Musical staff showing notes E \flat , G, B \flat , D \flat , F, A \flat , C \flat . Chord symbols: 9, #11, 13.

subV7/IV (Lydian $\flat 7$)

Musical staff showing notes G \flat , B \flat , D \flat , E \flat , F, A \flat , C \flat . Chord symbols: 9, #11, 13.

subV7/V (Lydian $\flat 7$)

Musical staff showing notes A \flat , C, E \flat , F, G, A \flat , C \flat . Chord symbols: 9, #11, 13.

$\flat VII7$ (Lydian $\flat 7$)

Musical staff showing notes B \flat , D, F, A \flat , C, E \flat , G \flat . Chord symbols: 9, #11, 13.

IV7 (Lydian $\flat 7$)

Musical staff showing notes F, A \flat , C, E \flat , G, A \flat , C \flat . Chord symbols: 9, #11, 13.

All extended subV7's (Lydian $\flat 7$)

Two musical staves illustrating extended subV7 chords and resolutions. The first staff shows $E7^{(III)}$ resolving to $A7$, both labeled as "Extended dominant Mixolydian". The second staff shows $A\flat 7$ resolving to $D\flat 7$, both labeled as "Extended subV Lydian $\flat 7$ ".

The chord scale used for **extended dominant chords** is the same as that used for V7/V (expected resolution down a perfect fifth): **Mixolydian**.

Though alterations are possible to all forms of Mixolydian scales, the only alterations normally available to the Lydian $\flat 7$ scale occur on the substitute dominants of I, IV, and V. Since those chords have an expected resolution to a major chord, the major third of the chord of resolution may occur in the **Lydian $\flat 7$ ($\sharp 9$)** chord scale as an alternative. Although infrequent, $\sharp 9$ on a Lydian $\flat 7$ chord is more likely to be found on sub V7/I:

subV7 (Lydian $\flat 7$) to Imaj7

subV7($\sharp 9$)/I [Lydian $\flat 7$ ($\sharp 9$)] to Imaj7

subV7($\sharp 9$)/IV [Lydian $\flat 7$ ($\sharp 9$)]

subV7($\sharp 9$)/V [Lydian $\flat 7$ ($\sharp 9$)]

Though $\flat 9$ and $\sharp 9$ may normally coexist, $\flat 9$ is not available in the above alterations to the Lydian $\flat 7$ scale.

NOTABLE

DIMINISHED CHORD PATTERNS

Diminished seventh chords are most often found in major keys as linking chords between neighboring diatonic chords, or as approach chords to diatonic chords. The most common patterns for these diminished seventh chords are:

*I^o7 approaching II-7 or passing to II-7 from I(maj7)

D7

*II^o7 approaching III-7 or passing to III-7 from II-7

3^o7

*IV^o7 approaching V7 or passing to V7 from IV(maj7)

D7

(A C E G)

E^b7 *A^m7*

I⁷ **#V⁷** **VI-7**

#V⁷ approaching VI-7 or passing to VI-7 from V7

bIII⁷ approaching II-7 or passing to II-7 from III-7

bIII⁷ **II-7**

G^b7

VI-7 **bVI⁷** **V⁷**

bVI⁷ approaching V7 or passing to V7 from VI-7

B7^{♭9} → E^{♭m7} → C⁶

I^{♭7} as an auxiliary to the tonic [I(maj7)]

V^{♭7} as an auxiliary to the dominant (V7)

These examples of root motion can be used to categorize the three different types of diminished chords:

- 1) The ascending diminished seventh chords have root motion up a half step from non-diatonic to diatonic.
- 2) The descending diminished seventh chords have root motion down a half step from non-diatonic to diatonic.
- 3) The auxiliary diminished seventh chords have a common root with the tonic or dominant chord respectively.

All diminished seventh chords contain two tritone intervals. Because of these tritones, diminished chords are extremely unstable, and have a clear tendency or "need" to resolve. Additionally, all diminished seventh chords contain non-diatonic pitches; the ascending and descending diminished seventh chords have roots which are not in the key. **ALL DIMINISHED SEVENTH CHORDS HAVE A VERY STRONG DEMAND FOR RESOLUTION.** In most cases, the expected resolution is to a neighboring diatonic chord or diatonically rooted chord.

The ascending diminished seventh chords are derived from the secondary dominants of their target chords and have smooth voice leading characteristics.

*I^o7 can be seen as an inverted V7(b9)/II:

Handwritten musical notation in C major. The first measure shows Cmaj7 (C4, E4, G4, Bb4). The second measure shows A7(b9) (A4, C#5, E5, G5, Bb5) with a handwritten note "#I^o7" below it. The third measure shows D-7 (D4, F4, Ab4, Bb4). The bass line consists of whole notes: C3, A2, D3.

*II^o7 is derived from an inverted V7(b9)/III:

Handwritten musical notation in C major. The first measure shows Cmaj7 (C4, E4, G4, Bb4). The second measure shows C#7 (C#4, E4, G4, Bb4). The third measure shows D-7 (D4, F4, Ab4, Bb4). The fourth measure shows B7(b9) (B4, D#5, F#5, Ab5, Bb5) with a handwritten note "#II^o7" below it. The fifth measure shows E-7 (E4, G4, Bb4, D5). The bass line consists of whole notes: C3, C#3, D3, B2, E3.

#IV°7 is derived from an inverted V7(b9)/V:

A musical score in C major showing the derivation of #IV°7. The top staff contains three chords: Fmaj7, D7(b9), and G7. The bottom staff shows the bass line with notes F, D, and G. The #IV°7 chord is indicated by a bracket under the D7(b9) chord.

*V°7 is derived from an inverted V7(b9)/VI:

A musical score in C major showing the derivation of *V°7. The top staff contains five chords: Fmaj7, F#°7, G7, E7(b9), and A-7. The bottom staff shows the bass line with notes F, F#, G, E, and A. The *V°7 chord is indicated by a bracket under the E7(b9) chord.

The descending diminished seventh chords are not derived from secondary dominant function since neither contains the tritone of the expected resolution chord's dominant. These two diminished chords are derived from chromatic voice leading.

^bIII°7 is expected to resolve to II-7:

A musical score in C major showing the resolution of ^bIII°7 to II-7. The top staff contains four chords: C, E-7, E^b°7, and D-7. The bottom staff shows the bass line with notes C, E, E^b, and D. The ^bIII°7 chord is indicated by a bracket under the E^b°7 chord.

Note that $\flat III^{\circ}7$ and $\sharp II^{\circ}7$ are enharmonically the same chords but the expected resolutions are different; the context in which they appear determines the function.

Similarly, $\flat VI^{\circ}7$ is expected to resolve to $V7$ (and is enharmonically the same as $\sharp V^{\circ}7$):

Handwritten musical notation in C major. The top staff shows three chords: A-7, Ab°7, and G7. The bottom staff shows the bass line with a flat VI°7 chord indicated below it. The notation is in treble clef with a common time signature.

The tonic and dominant chords of the key may be approached by their respective auxiliary diminished seventh chords ($I^{\circ}7$ and $V^{\circ}7$). Like the descending diminished chords, the auxiliary diminished seventh chords are derived from chromatic voice leading and not dominant function. They are found either delaying the resolution to the target chord or creating harmonic motion in a relatively static situation.

$I^{\circ}7$ is the auxiliary to the tonic chord:

Handwritten musical notation in C major. The notation shows a sequence of chords: G7, C°7, Cmaj7, C°7, and Cmaj7. The notation is in bass clef with a common time signature.

$V^{\circ}7$ is the auxiliary to the dominant chord:

Handwritten musical notation in C major. The notation shows a sequence of chords: D7, G°7, G7, G°7, and G7. The notation is in bass clef with a common time signature.

Unlike dominant chords which have a potential for deceptive resolution, diminished seventh chords have an absolute expectation for resolution. **IT IS RARE FOR A 7TH CHORD TO HAVE A DECEPTIVE RESOLUTION.** However, the ascending and descending diminished chords do have alternate chords of resolution. If an alternate resolution does occur, the chromatic root motion is still retained.

*I⁷ has an expected resolution to II-7 and an alternate resolution to II-7's related dominant: the V7 chord with its 5th in the bass:

*II⁷ has an expected resolution to the tonic III-7 chord and an alternate resolution to the tonic I chord with its 3rd in the bass:

*IV⁷ has an expected resolution to the dominant chord and an alternate resolution to the tonic I chord with its 5th in the bass:

*V⁷ has an expected resolution to VI-7 and an alternate resolution to the secondary dominant chord built on the same root: V⁷/II:

\flat III \cdot 7 has an alternate resolution to V7/5th in the bass:

\flat VI \cdot 7 has an alternate resolution to I/5th in the bass:

The auxiliary diminished chords do not have alternative resolutions.

AVAILABLE TENSIONS - DIMINISHED SEVENTH CHORDS

As was pointed out in previous topics, the tension numbering system to 13 does not work for diminished chords since there is a potential tension above each of the chord tones in the extended structures of diminished seventh chords:

Therefore, the possible tensions in the extended structures for diminished chords are not numbered, but simply identified as Tension if available (a major ninth above a chord tone).

Tensions for diminished seventh chords can be characterized as either diatonic for a diatonic situation or, non-diatonic for a non-diatonic situation. If an extended structure is created with all the tensions available, the resulting diminished chord can not be diatonic to any key. The available tensions will not fit into any valid key signature:

If the above chord's tensions are displaced an octave lower between each chord tone, a scale is created which is known as a SYMMETRIC DIMINISHED SCALE. This scale is composed of alternating whole steps and half steps;

Hence, the above diminished seventh and its available tensions would be found in a non-diatonic situation. If the target for any diminished seventh chord is diatonic, the available tensions must be diatonically oriented. Those resulting pitches a major ninth above a chord tone are labeled as "T" (for available Tension).

The available tensions for I°7, #II°7, bIII°7, and #IV°7 in the key of C major are:

(Filled in note heads represent pitches which are diatonic, but a minor 9th above a chord tone.) Since all the above diminished seventh chords contain the same enharmonic chord tones, the potential tensions generated from the extended structures are identical.

The available tensions for $\sharp V^{\circ}7$ and $\flat VI^{\circ}7$ (which contain the same enharmonic chord tones) in the key of C major are:

The available tensions for $\sharp I^{\circ}7$ and $V^{\circ}7$ in the key of C major are:

CHORD SCALES - DIMINISHED SEVENTH CHORDS

We have already seen that the **symmetric diminished scale** is appropriate for use when a diminished seventh chord is not functioning in a diatonic situation:

In this scale all non-chord tones are available tensions, and as is the case with all diminished seventh chords, the numbering system to 13 does not work. The tensions are labeled as "T" without an associated number.

Diminished seventh chords which have diatonic resolutions, however, should imply this diatonic orientation with the use of diatonic non-chord tones. The resulting chord scales contain chord tones, tensions, and avoid notes:

1°7

°1°7

°11°7

b111°7

$\sharp IV^{\circ}7$

$V^{\circ}7$

$\sharp V^{\circ}7$

$\flat VI^{\circ}7$

Unlike previous chord scales, the above diminished scales appear to have no names. However, a comparison with secondary dominant chords reveals identical chord scales for diminished and dominant chords.

$\sharp I^{\circ}7$ is expected to resolve to $II-7$ in many cases:

$V7(\flat 9)/II$ has a similar function:

The chord scale for $\sharp I^{\circ}7$ can be identified as the same scale as $V7(\flat 9)/II$ starting on the root of the diminished chord. The conditional avoid note situation occurring for the dominant chord does not occur for the diminished chord since the third of the diminished chord must be used.

Since $V^{\circ}7$ contains the same chord tones as $\sharp I^{\circ}7$, it uses the same scale as $V7(\flat 9)/II$.

#II^o7 is expected to resolve to III-7:

V7(^b9)/III has a similar function:

The chord scale for #II^o7 can be identified as the same scale as V7(^b9)/III starting on the root of the diminished chord. As in #I^o7, there are two avoid notes.

Since ^bIII^o7 and I^o7 contain the same chord tones as #II^o7, their chord scales can be identified as the same scale as V7(^b9)/III. Each starts on the respective diminished chord's root and contains two avoid notes:

^bIII^o7

I^o7

#IV^o7 also shares the same chord tones as the above three diminished seventh chords and may therefore share the same chord scale. However,

#IV^o7 is expected to resolve to V7:

V7(^b9)/V has a similar function:

In this case, #IV^o7 may use the same scale as either V7(^b9)/III or V7(^b9)/V, starting on the root of the diminished chord.

*IV-7(^b5)

*IV-7(^b5) is a chord functionally related to the previous passing and approach diminished seventh chords. It is also commonly found as the related II-7(^b5) of V7/III:

A musical staff in 3/4 time showing a sequence of chords: F, #IV-7(^b5) B-7(^b5), V7(^b9) III E7(^b9), and III-7 A-7. Arrows indicate the functional relationships between these chords.

Its structure contains a ^b5 since that pitch is the tonic of the key. It can also be built as a diminished triad with a minor seventh. This type of seventh chord structure has traditionally been called "half diminished" (occasionally abbreviated as ^ø). There are rare instances in contemporary music when a -7(^b5) chord truly functions as a half diminished chord; *IV-7(^b5) may function in this fashion.

*IV-7(^b5) is found as an approach chord to V7 or as a passing chord to V7 from IV or IV-:

Three musical examples showing B-7(^b5) resolving to C7. The first example shows B-7(^b5) C7. The second example shows B^bmaj7 B-7(^b5) C7. The third example shows B^b-7 B-7(^b5) C7.

As with the alternate resolution possibilities of the diminished seventh chords, an alternate resolution to the above pattern is to the tonic I chord with its 5th in the bass:

Three musical examples showing #IV-7(^b5) resolving to I⁶/_{5th}. The first example shows #IV-7(^b5) I⁶/_{5th} B-7(^b5) F⁶/C. The second example shows II^bmaj7 #IV-7(^b5) I⁶/_{5th} B^bmaj7 B-7(^b5) Fmaj7/C. The third example shows IV-7 #IV-7(^b5) I⁶/_{5th} B^b-7 B-7(^b5) F/C.

#IV-7(b5) is also found as an approach chord to IV or IV- or as a passing chord to IV or IV- from V7:

B-7(b5) Bbmaj7 C7 B-7(b5) Bb-7 B-7(b5) Bb-6

In the above example, the V7 chord can be seen deceptively resolving to #IV-7(b5). The expected resolution for V7 is down a perfect fifth to I, but, like all dominant chords, V7 may resolve deceptively down a half step (as substitute dominant root motion demonstrates) to #IV-7(b5):

II-7 G-7 V7/I C7 #IV-7(b5) B-7(b5) IV-7 Bb-7 III-7 A-7

This most often occurs as a means of delaying the cadence to tonic. An examination of the available tensions for #IV-7(b5) and comparing its available pitches to those available on the I chord shows that common melodic possibilities exist.

I maj7 Fmaj7 #IV-7(b5) B-7(b5)

As is the case with most -7(b5) chords (and all those seen so far), the available tensions for #IV-7(b5) are **11** and **b13**

CHORD SCALES – OTHER MAJOR KEY CHORDS

Though the diatonic IV chord usually uses a Lydian chord scale, there are two instances in which an Ionian scale is more appropriate.

- 1) If the IV chord is **preceded** by its dominant (either **V7/IV** or **subV7/IV**), the listener prefers to hear a **IV Ionian** chord scale.

A musical staff in C major showing a progression of chords: C (I), C7 (V7/IV), F (IV), and G7 (V7). The C7 chord is written as C⁷ and the F chord as F. Arrows indicate the progression from C7 to F and from G7 to the next measure.

- 2) If the intent is to have the listener expect the IV chord to progress to IV-, the listener prefers to hear a **IV Ionian** chord scale.

A musical staff in C major showing a progression of chords: Fmaj7 (IVmaj7), F-7 (IV-7), and C (I). The Fmaj7 chord is written as Fmaj⁷ and the F-7 chord as F-7.

As a general rule, the above IV chord and the I chord are the only major key chords which use an Ionian chord scale. **All other major chords** in major key use **Lydian**:

bIIImaj7

A musical staff showing the Lydian scale for Dbmaj7: D, E, F, G, A, B, C, D. The notes are written as whole notes on a treble clef staff. The chord symbol Dbmaj⁷ is written above the staff. The notes are labeled with 9, #11, and 13 below the staff.

bIIImaj7

A musical staff showing the Lydian scale for Ebmaj7: E, F, G, A, B, C, D, E. The notes are written as whole notes on a treble clef staff. The chord symbol Ebmaj⁷ is written above the staff. The notes are labeled with 9, #11, and 13 below the staff.

bVIImaj7

A musical staff showing the Lydian scale for Abmaj7: A, B, C, D, E, F, G, A. The notes are written as whole notes on a treble clef staff. The chord symbol Abmaj⁷ is written above the staff. The notes are labeled with 9, #11, and 13 below the staff.

bVIImaj7

A musical staff showing the Lydian scale for Bbmaj7: B, C, D, E, F, G, A, B. The notes are written as whole notes on a treble clef staff. The chord symbol Bbmaj⁷ is written above the staff. The notes are labeled with 9, #11, and 13 below the staff.

Other modal interchange chords borrowed from the parallel minor keys use the following chord scales:

I-7 Dorian

IV-7 Dorian

IV-6 either Dorian or Melodic minor

IV-(maj7) Melodic minor

V-7 Dorian

II-7(b5) Locrian natural 9

II-7(b5) Locrian, V7(b9) Mixolydian b9, #9, b13

[This is a more common use of II-7(b5)]

The above scales are appropriate when the modal interchange chord occurs in a major key.

II-7 chords which appear because of their _____ or _____ relationship use a Dorian scale:

The first staff shows a sequence of chords: E7, Bb-7, A7, Eb-7, and Ab7. Above the staff, a solid line connects E7 to A7, and a dashed line connects Bb-7 to Eb-7. Below the staff, the scales are labeled: Mixolydian for E7, Dorian for Bb-7, A7, and Eb-7, and Lydian for Ab7. The second staff shows Ab-7, Db7, and Cmaj7. A solid line connects Ab-7 to Db7, and a dashed line connects Db7 to Cmaj7. Below the staff, the scales are labeled: Lydian for Ab-7 and Db7, and Ionian for Cmaj7.

*IV-7(b5), like almost all minor seventh (b5) chords, uses a Locrian chord scale:

A musical staff in treble clef showing the Locrian scale for F#-7(b5). The notes are F#, G, A, B, C, D, E. The scale is labeled "F#-7(b5)" above the staff. Below the staff, the notes are numbered 1, 2, 3, 4, 5, 6, 7.

Dominant 7th sus4 chords use **mixolydian** chord scales but the 4th degree is available and the 3rd degree is avoided:

A musical staff in treble clef showing the mixolydian scale for G7(sus4). The notes are G, A, B, D, E, F. The scale is labeled "G7(sus4)" above the staff. Below the staff, the notes are numbered 1, 2, 3, 4, 5, 6, 7.

Dominant seventh chords which have an indicated *5 use a **Wholetone** scale (each pitch is a whole step above the previous pitch):

A musical staff in treble clef showing the wholetone scale for G+7. The notes are G, A, B, C, D, E, F. The scale is labeled "G+7" above the staff. Below the staff, the notes are numbered 1, 2, 3, 4, 5, 6, 7. The text "Whole steps" is written below the staff.

CHORD SCALES - MINOR KEYS

Due to the different configurations of the tonic minor key scales, more options are generated for the chord scales for diatonic minor key chords. However, **DIATONIC CHORDS IN MINOR KEYS USE DIATONIC CHORD SCALES**. The criteria for avoid notes remain the same as in major keys (with the exception of I-7 Dorian).

The I-6 chord uses either a **Dorian** chord scale with the 7th degree avoided or a **Melodic minor** chord scale:

The I-7 chord uses either a **Dorian** chord scale or an **Aeolian** chord scale. Unlike the avoided 6th degree for a II-7 Dorian scale, Dorian minor does allow for the use of tension 13:

The I-(maj7) chord uses either a **Melodic minor** chord scale (ascending version) or, less often, a **Harmonic minor** chord scale:

It should be noted that though uncommon, it is occasionally possible to find a Phrygian tonic minor chord scale.

All other diatonic chords from minor tonalities have chord scales based on the different tonic scales of those minor keys. Any non-chord tone a half step above a chord tone remains an avoid note. A review of the many minor key chords and the minor keys they are found in will demonstrate the freedoms available in the choice of an appropriate chord scale for any diatonic chord.

All dominant chords similar in function to those found in major key harmony (secondary dominants, substitute dominants, extended dominants, extended substitute dominants, etc.) have chord scales which meet necessary criteria for their construction: diatonic orientation = diatonic non-chord tones; expected resolutions of down a perfect fifth = some form of Mixolydian chord scale; expected resolutions of any root motion other than down a perfect fifth = Lydian \flat 7. Basically, if the root of a chord is diatonic, think diatonic for chord scale construction; if the root of a chord is non-diatonic, the construction of the chord scale needs a logical justification.

CHORD SCALES - BLUES

The chord scales common to blues harmonies are constructed using the chord tones and pitches from the blues scale.

The I7 chord in blues uses a **Mixolydian #9** chord scale:

In addition, it is possible to use diatonic pitches from the major scale as a basis for the chord scale:

I7 (Mixolydian):

Other blues chord scales can be derived by using diatonic pitches from other parallel tonalities and other pitches associated with blues (e.g. #4):

I-7 (from minor key) Dorian : - I7 Lydian b7, #9:

The **IV7** chord in blues uses a **Mixolydian** chord scale:

The **V7** chord (borrowed from major key harmonies) is either a **Mixolydian** scale, or a **Mixolydian with some alterations**, or an **altered** chord scale:

Other chords found in blues progressions are usually borrowed from major or minor key harmonies and therefore use their normal chord scales. **V7/II**, however, often takes a Mixolydian $\text{D}^{\flat}9$, $\text{D}^{\flat}9$, $\text{D}^{\flat}13$ chord scale.

SUMMARY OF CHORD SCALE CONSTRUCTION CONSIDERATIONS

(The following generalizations should be considered suggestions and not absolutes.)

HARMONIC AVOID NOTE CRITERIA:

Any note appearing in a chord scale which is a half step above a chord tone should be avoided harmonically, except $\flat 9$ and $\flat 13$ are available on dominant chords.

The 6th degree of the Dorian scale should be avoided except in a tonic Dorian minor context.

Either the 5th or the $\flat 13$ th of a dominant chord should be avoided if the other pitch is used.

CHORD SCALE CRITERIA:

Diatonic chords take diatonic chord scales, with the exception of IV when it is preceded by its dominant or expected to progress to IV-.

Any dominant chord with an expected resolution down a perfect fifth uses some form of Mixolydian or altered chord scale.

Any dominant chord not expected to resolve down a perfect fifth takes a Lydian $\flat 7$ chord scale.

If a dominant chord's chord scale is some form of Mixolydian, the scale may have added altered tensions.

Any dominant chord with a non-diatonic root uses Lydian $\flat 7$; any major chord non-diatonically rooted uses a Lydian scale.

The only alteration possible to Lydian $\flat 7$ is $\sharp 9$, if the expected chord of resolution is major.

$\flat 9$ and $\sharp 9$ may coexist in a Mixolydian scale except on a I chord in blues or on a Lydian $\flat 7$, $\sharp 9$ scale.

For minor 7 chords, it's usually a good practice to use Dorian when in doubt!

Most minor seven ($\flat 5$) chords use Locrian.

All suspended fourth chords use Mixolydian.

A wholetone scale is used for dominant chords with $\sharp 5$.

Most diminished seventh chords use a chord scale identical to one of the secondary dominant ($\flat 9$) scales.

MODULATION

Modulation is the movement of melodies and/or harmonies from one key into another. In order for a modulation to occur, the listener must shift from the original tonic reference to a new tonic reference.

The score consists of four staves. Above the first staff, the following chord symbols are listed: I^{maj7} , $subV^{7/III}$, II^{-7} , V^7 , I^{maj7} , IV^{maj7} , $\#IV^{-7}(b5)$, IV^{-6} . Below the first staff, the following chord symbols are listed: F^{maj7} , A^b7 , G^{-7} , C^7 , F^{maj7} , B^bmaj7 , $B^{-7}(b5)$, B^b-6 . The first staff shows a melody starting on F4, moving to A4, then G4, F4, E4, D4, C4, B3, A3, G3, F3, E3, D3, C3, B2, A2, G2, F2. The second staff shows a bass line starting on F2, moving to A2, then G2, F2, E2, D2, C2, B1, A1, G1, F1, E1, D1, C1, B0, A0, G0, F0. The third staff shows a melody starting on C4, moving to E4, then F4, G4, A4, B4, C5, B4, A4, G4, F4, E4, D4, C4, B3, A3, G3, F3, E3, D3, C3, B2, A2, G2, F2. The fourth staff shows a bass line starting on C2, moving to E2, then F2, G2, A2, B2, C3, B2, A2, G2, F2, E2, D2, C2, B1, A1, G1, F1, E1, D1, C1, B0, A0, G0, F0. Arrows indicate the modulation from F major to Bb major (up 4) and back to F major (down 4).

The above 16 measure tune contains a modulation from F major into B^b major and returns to F major. Notice that typical of this type modulation, the phrase in B^b may stand alone:

The score consists of two staves. The first staff shows a melody starting on F4, moving to A4, then G4, F4, E4, D4, C4, B3, A3, G3, F3, E3, D3, C3, B2, A2, G2, F2. The second staff shows a bass line starting on F2, moving to A2, then G2, F2, E2, D2, C2, B1, A1, G1, F1, E1, D1, C1, B0, A0, G0, F0. Arrows indicate the modulation from F major to Bb major (up 4) and back to F major (down 4).

However, B^b major is the **SECONDARY** key and F major is the **PRIMARY** key. The relationship of the secondary key to the primary key is shown with a small arrow in the direction of the modulation and the intervallic distance to the new key.

When modulations occur within tunes, it is common practice to use accidentals as opposed to changing key signatures. Generally, the less accidentals necessary in a modulation, the more closely the keys are related and the more subtle the modulation. The previous modulation required only the use of one additional flat to accomplish the modulation from F major (one flat) into B^b major (two flats). Modulations to distantly related keys are more obvious.

The above modulation (up a half step) requires accidentals for all the melody pitches. This type modulation, though sometimes found in tunes, is also a common device used by arrangers. The use of modulations upward tends to keep the music "forward moving". Therefore, most modulations are perceived as occurring in an upward direction. The above example is shown modulating from F major into F[#] major. It is easier however to notate and read the example modulating from F major into G^b major:

Although written enharmonically in G^b, the modulation sounds like tonic motion upward from F to F[#]. G^b requires 5 flats, but the listener perceives the modulation as going to F[#] (all pitches raised a half step from F).

DIRECT MODULATION

Modulations may occur directly from any diatonic chord. The most common form of **DIRECT** modulation is from the I chord, since the I chord establishes a point of tonal finality.

Three musical staves illustrating direct modulation from the I chord. The first staff shows a progression: I maj7 (Fmaj7) → II-7 (G-7) → III-7 (A-7) → V⁷/II (D7) → II-7 (G-7) → V⁷ (C7). The second staff shows: I maj7 (Fmaj7) → II-7 (Eb-7) → III-7 (F-7) → V⁷/II (Bb7) → I maj7 (Dbmaj7) → II-7 (Eb-7) → III-7 (F-7) → V⁷/II (Bb7). The third staff shows: II-7 (Eb-7) → V⁷ (Ab7) → I maj7 (Dbmaj7) → I maj7 (Fmaj7). Arrows and annotations like '↑-6 (or ↓3)' indicate the intervallic relationship between roots.

When the harmony modulates, the melody may or may not modulate. For example the melody may repeat while the chord progression modulates. As seen above, however, when the melody modulates the harmonies must modulate.

Three musical staves illustrating modulation from a diatonic II-7 chord. The first staff shows: II-7 (C-7) → sub V⁷/II (Db7) → II-7 (C-7) → V⁷/I (F7) → III-7 (D-7). The second staff shows: II-7 (C-7) → I maj7 (Dbmaj7) → sub V⁷/II (E7) → II-7 (Eb-7) → V⁷/II (Ab7). The third staff shows: III-7 (F-7) → II-7 (Eb-7) → I maj7 (Dbmaj7) → I maj7 (Fmaj7). Arrows and annotations like '↑-3' and '↓-3 (OR) ↑6' indicate the intervallic relationship between roots.

The above example shows a modulation from the diatonic II-7 chord directly to the new key a minor 3rd higher. DIRECT MODULATIONS FROM DIATONIC CHORDS OTHER THAN I OR V USUALLY INVOLVE STEPWISE ROOT MOTION.

PIVOT CHORD MODULATIONS

Chords which function in both the original/primary key and in the new/secondary key are **PIVOT CHORDS**. Their dual functions are indicated by two analysis symbols; one in parentheses showing initial function, and one justifying the function in the new key:

The first staff shows a progression in F major: I_{maj7} (F_{maj7}) → $II-7$ ($G-7$) → I_{maj7} (F_{maj7}) → $(II-7)$ ($III-7$) ($G-7$) → $II-7$ ($F-7$). A downward arrow with a '2' indicates a tritone substitution.

The second staff shows a progression in E-flat major: I_{maj7} (E^b_{maj7}) → $II-7$ ($F-7$) → I_{maj7} (E^b_{maj7}) → I_{maj7} (E^b_{maj7}) → $II-7$ ($F-7$). An upward arrow with a '2' indicates a tritone substitution.

As is the case for all chords requiring parenthetical analysis, the choice of chord scale for a pivot chord is based on the chord's initial function.

The first staff shows chord scales: I_{maj7} (Ionian) → $II-7$ (Dorian) → I_{maj7} (Ionian) → $(II-7)$ ($III-7$) (Dorian) → $II-7$ (Dorian). A downward arrow with a '2' indicates a tritone substitution.

The second staff shows chord scales: I_{maj7} (Ionian) → $II-7$ (Dorian) → I_{maj7} (Ionian) → $(II-7)$ ($III-7$) (Ionian) → $II-7$ (Ionian). An upward arrow with a '2' indicates a tritone substitution.

The usual practice of determining chord scales by initial function is done to present the listener with a deceptive, but acceptable surprise. Therefore, a pivot chord is heard and analyzed first in terms of the preceding key, and then in terms of the new key to be established.

DOMINANT CHORD MODULATIONS

Modulations from dominant chords, like other pivot chord modulations, may exhibit dual function (deceptive resolution). Also, dominant chords which resolve deceptively will be analyzed in terms of both old and new keys. All dominant chords have an expectation for resolution. However, the different resolutions demonstrated by different types of dominant chords allow for the following root motion patterns to new keys:

DOWN A PERFECT 5TH:**V7 to Imaj7****DOWN A HALF STEP:****subV7 to Imaj7****UP A WHOLE STEP:****bVII7 to Imaj7****DOWN A TRITONE:****V7 to bIIImaj7**

DOWN A MAJOR THIRD:

V7 to \flat IIIImaj7

UP A HALF STEP:

V7 to \flat VIImaj7

Additionally, the expected diatonic chord of resolution for a secondary dominant may deceptively change quality and become a chord functioning in the new key:

V7/II to new Imaj7

V7/III to new Imaj7

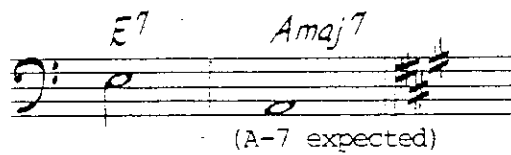

V7/IV to new Imaj7

(This may not sound like a modulation since IV is a diatonic maj7 chord)

V7/V to new Imaj7

Musical notation showing a bass clef staff with two notes. The first note is a whole note labeled *D7*. The second note is a whole note labeled *Gmaj7*. Below the staff, the text "(G7 expected)" is written.

V7/VI to new Imaj7

Musical notation showing a bass clef staff with two notes. The first note is a whole note labeled *E7*. The second note is a whole note labeled *Amaj7*. Below the staff, the text "(A-7 expected)" is written.

Therefore, **ANY DOMINANT CHORD MAY RESOLVE DECEPTIVELY INTO A NEW KEY.** Though the other above patterns may occur, the root motion from a dominant seventh will usually be either down a perfect fifth or down a half step or up a step.

Extended dominant and extended substitute dominant motion (with or without the related II-7 chords) may eventually result in a modulation.

The diagram shows two staves of music. The top staff is in C major and contains the following chords: Cmaj7, F#7(b9), F7, E-7(9), A7(#11), Ab-7, and Db7(#11). Dashed arrows indicate the progression from one chord to the next. The bottom staff shows C-7, F7(#11), and Emaj7, with dashed arrows indicating their relationship to the chords above.

The same example may be used to demonstrate modulation to a different key by adding one or more dominant chords:

The diagram shows two staves of music. The top staff is in C major and contains the following chords: Cmaj7, F#7(b9), F7, E-7(9), A7(#11), Ab-7, and Db7(#11). Dashed arrows indicate the progression from one chord to the next. The bottom staff shows C-7, F7(#11), E-7, Eb7, and Dmaj7, with dashed arrows indicating their relationship to the chords above.

The previous transition from the original key into the new key can be seen as a modulation, because all the dominant activity makes it difficult for the listener to hear the original tonic-reference. This **transitional** type modulation, though not very common in tunes, is an occasionally used arranging device.
